DETAILED ACTION

Response to Amendment

1. The RCE filed 11/14/07 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 2-8, 13, and 15 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 2-8, 13, and 15 rejected under 35 U.S.C. 102(e) as being anticipated by Odate (US 6,844,961 filed Mar. 25, 2002).

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

With regard to claims 2, 5-6, 13, and 15, Odate discloses an amplification system (fig. 8) employing Raman amplification (col. 4, line 49) with a plurality of 1st order Raman pumps (#21-1) and at least one 2nd order Raman pump (#21-2) which amplifies the 1st order Raman pumps, the 1st and 2nd order Raman pumps counter-propagating (EXCITED LIGHT PULSE) to signal light in an optical fiber, the amplification system comprising:

- a plurality of light sources generating pump light of the 1st and 2nd order pumps (#21-1 to 21-N);
- a modulator unit (fig. 9, #21c) modulating the pump light of the 1st and 2nd order pumps by using a 1st timing for the pump light of the 1st order pumps (col. 7, lines 5-10) and a 2nd timing relatively different from the 1st timing for pump light of the at least one 2nd order pump (timing is set so that the excitation pulses do not overlap) to allow flattening lateral signal power distribution along the fiber.

With regard to claim 3, the 3rd order pumps are #43-n.

With regard to claim 4, fig. 10 discloses co-propagation.

With regard to claim 8, the clock supply unit #21a is electronic.

With regard to claim 9, #21c is optical.
